

FOR IMMEDIATE RELEASE: The New SLP GM Truck Supercharger Provides Both Premium Power And Quality

SLP Performance develops refined TVS2300 supercharger package for 2014 Silverado, Sierra, and SUV's with 5.3L Direct Port Injection.

SEMA Show, Las Vegas, Nevada – November 5, 2013 - SLP Performance has long been known for its powertrain products, especially so for its superchargers. The company now continues this lineage for the 2014 GME truck market with a new TVS2300 supercharger package. Not only does the company do this by producing significant raw power gains, but also by tempering its kits with a robust and reliable calibration to accompany the upgrade. The kit has also been specially designed for ease of installation -- installing in only 8-10 hours with completely bolt-on process and with all required hardware components included.

The supercharger is manufactured in the USA and comes with an industry-leading 3 year / 36,000 mile SLP Limited Powertrain Warranty.

Product Highlights

- Designed from a clean sheet of paper to meet or exceed all OEM design, engineering and manufacturing standards
- New, larger TVS2300 supercharger for more power (previously TVS1900)
- Direct drive rotor pack eliminates the need for a jackshaft, extra bearings, extra pulleys and rear belt resulting in increased efficiency
- Intercooled with high-flow circulating pump and larger capacity coolant reservoir
- Intake manifold ports are port-matched (designed into casting) to the cylinder head ports for greater air flow
- Higher flow intake tube and new bellows included (connects to factory air-box assembly)
- New 2 BAR map sensor allows more accurate fuel delivery under boost conditions
- Includes plug-and-play wire harnesses, pre-bent and pre-cut hoses (no modifications required)
- SLP developed custom PCM calibrations for each specific SLP supercharger package
- Easiest supercharger installation on the market, installs in 8-10 hours
- Completely bolt-on installation, each package includes all necessary components to complete the installation, along with a detailed installation manual
- Most competitively priced TVS superchargers on the market
- Distinctive SLP outer case design mimics the inner helix design of the rotor pack (patent pending)

- 3 year/36,000 mile Warranty on supercharger components
- Optional 3 year/36,000 mile SLP Limited Powertrain Warranty
- Supercharger manufactured in the USA
- Fits 2014 Silverado, Sierra, and SUV's with 5.3L Direct Port Injection

Availability

Availability for the kit is scheduled for Spring, 2014. Stay tuned for updates on this product by visiting SLPonline.com and subscribing to the SLP Newsletter.

About SLP Performance

Established in 1987, SLP Performance has stood for quality performance enhancements for late-model American Muscle cars from the beginning, and it continues this commitment today. SLP's initial claim to fame says it all: It was the first company in the performance aftermarket to develop and manufacture a 50-state emission-legal performance package -- specifically for V8 Camaros and Firebirds. True to its name ("Street Legal Performance"), the vision of SLP's part program is to not just provide performance, but to do so with the best engineering practices and quality possible, far exceeding the industry standards.
